

Android Developer

Name: GirishKumar Patchikoru

Email ID: girish5f9@gmail.com

Phone: +1(361)905-5644

SUMMARY

- Android Developer with **5+ years of experience** in designing, developing, and maintaining modern, high-performance Android applications for enterprise and customer-facing platforms.
- Strong expertise in **Kotlin, Java, MVVM architecture, Jetpack components, and modular application design**, building scalable, maintainable, and production-ready mobile solutions.
- Experienced in integrating **REST APIs, JSON services, Firebase, OAuth 2.0, JWT, and third-party SDKs** for secure and seamless backend communication.
- Skilled in building responsive and intuitive mobile interfaces using **Material Design, Constraint Layout, RecyclerView, Card View, ViewPager2, and Jetpack Compose**.
- Hands-on experience with **Live Data, View Model, Room Database, Realm, SQLite, offline caching, and background services** to create reliable and efficient Android applications.
- Proficient in implementing **push notifications, Firebase Cloud Messaging (FCM), analytics, and crash monitoring** to improve user engagement and application stability.
- Strong experience in **performance optimization, memory management, battery efficiency, and low-latency mobile operations** across different devices and OS versions.
- Well-versed in **unit testing, UI testing, and functional testing** using **JUnit, Mockito, Espresso, and XCTest**, ensuring high-quality and stable releases.
- Experienced with **CI/CD pipelines, automated builds, testing, and deployment** using **Bitwise, Fastlane, Jenkins, GitHub Actions, and Gradle**.
- Worked extensively in **Agile/Scrum environments**, collaborating with product managers, designers, QA teams, and backend engineers to deliver features on time.
- Strong knowledge of **Git, GitHub, GitLab, Bitbucket, Jira, and Confluence** for version control, sprint tracking, code reviews, and collaborative development.
- Adept at troubleshooting production issues, improving app usability, mentoring junior developers, and delivering secure enterprise-grade mobile applications.

TECHNICAL SKILLS:

- **Mobile Development:** Swift, Objective-C, Kotlin, Java, Android Studio, Xcode, Gradle, Cocoa Pods, Jetpack Components
- **UI/UX:** Storyboards, Swift UI, Auto Layout, Constraint Layout, Material Design, Human Interface Guidelines
- **Backend Integration:** REST APIs, JSON, SOAP, GraphQL, Firebase, AWS SDKs
- **Testing & QA:** XCTest, Espresso, JUnit, UI Testing, Postman
- **CI/CD:** GitHub Actions, Bitwise, Jenkins, Fastlane
- **Version Control:** Git, GitHub, GitLab, Bitbucket
- **Agile Tools:** Jira, Confluence, Trello, Azure DevOps
- **Analytics & Monitoring:** Firebase Analytics, Crashlytics, Google Analytics, Mix panel, AppDynamics
- **Other:** Push Notifications, OAuth 2.0, JWT, SQLite, Realm, Core Data, Multithreading, Networking, Security Best Practices

PROFESSIONAL EXPERIENCE

Client: J&J – Pennsylvania
Role: Android Developer

Aug 2025 – Present

<https://play.google.com/store/apps/details?id=mobile.appBStPAoj8kO>

Description:

J&J is an enterprise mobile platform designed for internal and external users, supporting secure business workflows, real-time communication, notifications, analytics, and performance-driven mobile experiences. The application focuses on scalability, usability, security, and cross-functional enterprise operations.

Responsibilities:

- Designed and developed enterprise-level Android and iOS applications for internal and external users, ensuring high performance, usability, and security.
- Built new features and enhanced existing modules with a focus on maintainable architecture and seamless user experience.
- Integrated mobile applications with **RESTful APIs, JSON endpoints, and third-party SDKs** for secure backend communication. Developed reusable UI components and modular architecture for clean, scalable, and testable code.
- Optimized app performance, memory usage, and battery efficiency across devices and operating system versions.
- Implemented **push notifications, background services, and offline caching** to improve engagement and reliability.
- Conducted **unit testing, UI testing, and functional testing** using **XCTest, Espresso, and JUnit**.
- Collaborated with UX designers and product managers to deliver intuitive, accessible, and enterprise-friendly mobile interfaces.
- Set up and maintained **CI/CD pipelines with Bitrise and Fastlane** for automated builds, testing, and deployment. Monitored app analytics, crash reports, and user feedback to continuously improve app stability and performance.
- Ensured compliance with **Android Material Design** and **iOS Human Interface Guidelines**. Troubleshoot production issues and resolved defects quickly to minimize downtime for enterprise users.
- Mentored junior mobile developers, reviewed code, and enforced coding standards and best practices.
- Delivered releases to **Google Play** and **App Store** with proper versioning, release notes, and deployment workflows.
- Worked closely with QA teams to ensure high-quality releases through detailed test planning and validation.

Environment: Android Studio, Xcode, Kotlin, Swift, REST APIs, Firebase, Git, Jira, Agile, CI/CD, Core Data, Realm

Client: Kroger – Ohio
Role: Android Developer

Feb 2024 – Jul 2025

https://play.google.com/store/apps/details?id=com.kroger.mobile&hl=en_US

Description: Kroger is a retail and grocery mobile platform that supports customer shopping experiences, store operations, notifications, digital services, and real-time backend integrations. The application provides secure, fast, and user-friendly services across multiple devices.

Responsibilities:

- Developed and maintained mobile applications for retail operations and customer-facing platforms.
- Developed and maintained Android and iOS mobile applications for retail operations and customer-facing services.
- Built dashboards, reporting tools, and notification features for internal store workflows and customer engagement.

- Integrated applications with cloud services and backend systems to enable **real-time data synchronization**. Implemented advanced UI features including custom views, animations, and interactive mobile components.
- Conducted code reviews and testing to ensure robust, stable, and high-quality production releases. Ensured applications followed accessibility standards and supported multiple devices and OS versions.
- Optimized API calls, caching mechanisms, and app responsiveness for improved performance. Collaborated with cross-functional teams including product, design, QA, and backend teams to deliver features on schedule.
- Participated in **Agile ceremonies** including sprint planning, retrospectives, and daily stand-ups.
- Enhanced app navigation, layouts, and information architecture to improve customer usability.
- Deployed updates using **CI/CD pipelines**, ensuring smooth production releases with minimal downtime.
- Monitored app analytics and customer feedback to improve features, usability, and performance.
- Debugged complex issues in Android and iOS applications and resolved production bugs efficiently.
- Contributed to reusable enterprise-wide UI and UX design systems for consistency across applications.
- Documented technical workflows, specifications, and integration points for team collaboration and maintainability.
- Assisted junior developers by providing technical guidance and support for complex feature implementation.

Environment: Android Studio, Xcode, Kotlin, Swift, REST APIs, Firebase, GitHub, Jira, Agile, CI/CD, Core Data, Realm

Infinite Solutions ,India

July 2020 – July 2023

Role: Android Developer

Client: Justdial LTD

https://play.google.com/store/apps/details?id=com.justdial.search&hl=en_US

Description: Justdial is a multi-category local search and discovery platform that helps users find nearby businesses, restaurants, hotels, healthcare services, transport, and other local vendors. The application offers search, location-based recommendations, ratings, reviews, offers, and personalized user experiences.

Responsibilities:

- Designed and developed Android application features using **Kotlin** and **MVVM architecture**, improving code modularity, scalability, and maintainability.
- Used **ViewModel** and **LiveData** for lifecycle-aware state management and responsive UI updates across listing, search, and profile screens.
- Built business listing and detail modules for categories such as hotels, restaurants, travel, healthcare, and local services.
- Implemented **RecyclerView** and **CardView** to display dynamic business listings with smooth scrolling and optimized rendering performance. Developed detailed business profile screens with image galleries, contact details, ratings, reviews, offers, and service information.
- Integrated **Glide** for efficient image loading, caching, and memory optimization across listing and details pages.
- Developed search and location-based discovery features to help users find nearby businesses and services.
- Integrated **Google Places SDK** and location services to improve place autocomplete, search accuracy, and personalized nearby recommendations.
- Built modules for favorites, saved businesses, and user preferences to improve user convenience and engagement.
- Contributed to ratings, reviews, and verified listing features, helping users make informed decisions.

- Supported service-booking and local discovery journeys for hotels, restaurants, doctors, transport, and other vendors.
- Integrated **Firestore Cloud Messaging (FCM)** for personalized notifications related to offers, reminders, and promotions.
- Implemented secure backend communication and session handling using **OAuth 2.0** and API integration best practices.
- Performed **unit testing with JUnit and Mockito** and **UI testing with Espresso** to improve reliability and reduce regressions.
- Participated in code reviews, source control management, pull requests, and collaborative development using **GitHub**.
- Managed **Gradle configurations**, build types, product flavors, and dependency versions to support scalable Android releases.
- Worked in an **Agile environment**, participating in sprint planning, daily stand-ups, grooming sessions, and retrospectives using **Jira**. **Environment:** Xcode, Android Studio, Swift, Kotlin, Java, REST APIs, Firebase, GitLab, Agile, CI/CD

PERSONAL PROJECTS

Mental Health Support Chatbot — Texas, USA

Dec 2024 – May 2025

- Built an AI-based chatbot for psychiatrist patient support using Llama-2, Mixtral, and Retrieval-Augmented Generation (RAG) techniques.
- Collected and cleaned large-scale text data from books and online resources using preprocessing techniques such as text normalization and fuzzy matching.
- Improved answer relevance and contextual understanding by fine-tuning the model on extracted case-study-based content.

Smart Expense Tracker App — Texas, USA

Jun 2024 – Aug 2025

- Developed an Android expense tracker application using **Kotlin, MVVM, Room Database, and LiveData** to help users manage daily spending and monthly budgets.
- Implemented category-wise expense tracking, budget alerts, and transaction history with clean UI using **RecyclerView** and **Material Design**.
- Added data visualization for spending insights and optimized offline storage for smooth performance and reliability.

Campus Mood Map — Texas, USA

Jan 2024 – May 2025.

- Developed a **Campus Mood Map** Android application using **Kotlin, MVVM, Firebase, and Google Maps SDK** to help students discover study spaces based on crowd level, noise level, stress level, and safety feedback.
- Implemented **anonymous check-in and reporting features**, allowing students to share real-time campus environment updates without exposing personal identity.
- Built **interactive map-based visualization** with color-coded markers and filters so users could quickly find quiet, safe, and less crowded places on campus.
- Integrated **Firestore Realtime Database / Firestore** to store live location-based updates and display dynamic hotspot trends across different campus areas.
- Added **notifications and time-based insights** to alert students about changing conditions in popular study zones and improve overall campus experience

Operating System Kernel Optimization — C, System Programming

- Engineered custom system calls and CPU scheduling algorithms that improved process execution efficiency by 22% and reduced system response time
- Developed memory management systems with lazy allocation and copy-on-write mechanisms, optimizing disk space utilization and achieving 15% performance improvement
- Implemented core Unix command utilities and file system operations, creating process management tools that enhanced operational efficiency by 20%

EDUCATION

Texas A&M University, Master of Science in Computer Science

Jawaharlal Nehru Technological University, Kakinada, Bachelor of Technology in Computer Science
