

DevOps Engineer

Name: Girishkumar Patchikoru

Email: girishdevcode@gmail.com

Phone No: 361-905-5644

LinkedIn: www.linkedin.com/in/girishdevcode/

PROFESSIONAL SUMMARY:

- **DevOps Engineer** with **5 years** of experience supporting and automating cloud-native infrastructure across AWS, enabling high availability, fault tolerance, and enterprise-grade system reliability.
- Proven expertise in building and optimizing end-to-end CI/CD pipelines using Jenkins, GitHub Actions, and GitLab CI, significantly accelerating release cycles and improving deployment consistency.
- Hands-on experience in containerization using Docker and orchestration using Kubernetes (EKS), enabling seamless transition from monolithic to microservices-based architectures.
- Strong background in Infrastructure as Code using Terraform and CloudFormation, delivering automated, version-controlled, and reproducible infrastructure deployments.
- Deep knowledge of AWS services including EC2, EKS, S3, IAM, VPC, RDS, and CloudWatch for building secure and production-grade distributed systems.
- Experience supporting multi-cloud environments across AWS and Azure, including Azure Virtual Machines, Storage Accounts, and Virtual Networks
Hands-on exposure to Azure DevOps pipelines for build and deployment automation across multiple environments
- Expertise in implementing GitOps workflows using ArgoCD, ensuring declarative and automated application deployments across environments.
- Implemented monitoring and observability solutions using industry-standard tools, improving system visibility and reducing MTTR.
- Strong Linux administration and scripting expertise using Bash and Python to automate operational workflows and reduce manual effort.
- Experienced in configuration management using Ansible, ensuring environment consistency and eliminating configuration drift.
- Integrated DevSecOps practices into pipelines using Snyk, Trivy, and SonarQube, ensuring secure and compliant software delivery.
- Demonstrated ability to optimize cloud costs through auto-scaling, resource right-sizing, and efficient infrastructure utilization strategies.
- Worked on highly available AWS deployments using multi-AZ architecture and supported disaster recovery implementations to ensure business continuity.
- Strong troubleshooting skills with expertise in root cause analysis, performance tuning, and incident management in production environments.
- Solid understanding of networking concepts including DNS, Load Balancers, VPC, and secure connectivity patterns.
- Experienced in working within Agile/Scrum environments, collaborating with cross-functional teams to improve delivery efficiency.

TECHNICAL SKILLS:

Cloud Platforms: AWS (EC2, EKS, S3, IAM, VPC, RDS, CloudWatch, Auto Scaling, ELB), Azure (VMs, Storage, Networking), GCP (GKE, Cloud Storage, IAM, Cloud Monitoring)

CI/CD & DevOps Tools: Jenkins, GitHub Actions, GitLab CI/CD, ArgoCD, Maven, SonarQube

Containerization & Orchestration: Docker, Kubernetes (EKS), Helm, ConfigMaps, Secrets, Ingress

Infrastructure as Code: Terraform (Modules, Remote State, Workspaces), AWS CloudFormation

Configuration Management: Ansible

Monitoring & Observability: Prometheus, Grafana, ELK Stack (Elasticsearch, Logstash, Kibana), AWS CloudWatch

Scripting & Automation: Bash (Shell Scripting), Python

Version Control: Git (GitHub, GitLab, Bitbucket)

Security & DevSecOps: IAM, RBAC, Snyk, Trivy, SonarQube, HashiCorp Vault (basic)

Operating Systems: Linux (RHEL, Ubuntu, CentOS)

Networking: VPC, Subnets, Route Tables, NAT Gateway, Load Balancers (ALB/NLB), DNS

PROFESSIONAL EXPERIENCE:

Client: MUFG, New York, NY

July 2024 – Till Date

Role: DevOps Engineer

Responsibilities:

- Implemented and maintained AWS cloud infrastructure using Terraform to support production applications, provisioning VPCs, EKS clusters, IAM roles, and multi-AZ deployments
- Developed and maintained CI/CD pipelines using Jenkins, GitHub Actions, and GitLab CI, integrating automated build, test, security scanning, and deployment workflows
- Supported Kubernetes (EKS) cluster deployments and managed containerized microservices applications, implementing rolling updates and deployment strategies
- Worked on GitOps-based deployments using ArgoCD to improve deployment consistency across dev, QA, and production environments
- Implemented monitoring and logging using Prometheus, Grafana, and ELK stack to enable real-time monitoring and centralized logging
- Automated infrastructure provisioning, configuration management, and environment setup using Terraform and Ansible, ensuring repeatability and scalability
- Supported hybrid cloud deployments across AWS and Azure, assisting with Azure Virtual Machines and storage services for select applications
- Integrated DevSecOps practices by embedding tools like Snyk, Trivy, and SonarQube into CI/CD pipelines
- Supported cloud cost optimization using auto-scaling and resource utilization strategies, improving infrastructure efficiency
- Configured CI/CD pipelines to support deployments on GKE clusters alongside AWS EKS
- Collaborated with development teams to refactor and containerize legacy applications using Docker, transitioning monolithic systems into scalable microservices architecture
- Conducted root cause analysis and performance tuning for production issues, leveraging logs, metrics, and traces to improve system reliability and uptime

Environment: AWS (EC2, EKS, S3, IAM, VPC, CloudWatch), Terraform, Kubernetes, Docker, Jenkins, GitHub Actions, GitLab CI, ArgoCD, Prometheus, Grafana, ELK Stack, Ansible, Snyk, Trivy, Linux, Python, Bash

Client: Icertis Solution Pvt. Ltd

Feb 2022 – Aug 2023

Role: DevOps Engineer

Responsibilities:

- Developed and maintained scalable CI/CD pipelines using **Jenkins and GitLab CI**, automating build, test, and deployment processes for enterprise SaaS applications, ensuring faster and more reliable software delivery
- Containerized applications using **Docker** and orchestrated deployments on **Kubernetes clusters**, enabling horizontal scalability and improved application resilience
- Provisioned and managed cloud infrastructure on AWS using **Terraform**, creating reusable modules for consistent and repeatable infrastructure deployments across multiple environments
- Implemented comprehensive monitoring and alerting systems using **Prometheus and Grafana**, enabling proactive issue detection and performance optimization
- Automated configuration management using **Ansible**, standardizing environment setup and reducing configuration drift across development and production systems
- Developed serverless automation workflows using AWS Lambda for infrastructure operations and monitoring tasks
- Designed and implemented multi-environment deployment strategies (Dev, QA, UAT, Prod) with controlled promotion pipelines and approval workflows
- Integrated automated testing and rollback mechanisms into CI/CD pipelines to improve deployment success rates and minimize downtime during failures
- Supported cloud infrastructure deployments on **Azure using Virtual Machines, Storage Accounts, and Virtual Networks** for development and testing environments
- Worked with **Azure DevOps pipelines** to support build and deployment workflows across multiple environments
- Managed version control workflows using **Git**, implementing branching strategies and code review practices to ensure code quality and collaboration
- Strengthened cloud security by implementing **IAM policies, role-based access control, and secrets management solutions**, ensuring compliance with enterprise standards

- Collaborated closely with development, QA, and product teams in Agile environments to streamline release cycles and improve delivery efficiency

Environment: AWS, Terraform, Docker, Kubernetes, Jenkins, GitLab CI, Ansible, Prometheus, Grafana, Git, Linux, Bash

Client: Adrian Technologies Pvt Ltd

Apr 2020 – Jan 2022

Role: Linux Administrator

Responsibilities:

- Administered and maintained Linux servers (**RHEL, Ubuntu**) including installation, configuration, patching, and performance tuning to ensure system stability and uptime
- Automated system administration tasks using **Bash scripting**, reducing manual workload and improving operational efficiency
- Monitored system health, CPU, memory, disk usage, and network performance using native Linux tools and monitoring solutions
- Managed user access controls, permissions, and security policies to ensure secure system operations
- Installed, configured, and maintained web servers such as **Apache and Nginx**, supporting application hosting requirements
- Performed regular backup and recovery operations, ensuring data integrity and disaster recovery readiness
- Diagnosed and resolved system, application, and network issues, minimizing downtime and ensuring service continuity
- Supported deployment activities by collaborating with development and DevOps teams during release cycles
- Maintained system logs and documentation to support auditing and compliance requirements

Environment: Linux (RHEL, Ubuntu), Bash, Apache, Nginx, Networking, Monitoring Tools

EDUCATION

Texas A&M University–Corpus Christi

Masters in computer Science

Certifications:

- [Google Professional Cloud Architect Certification](#)
- [Microsoft Certified: Azure Developer Associate](#)
- [Oracle Cloud Infrastructure 2025 Certified Foundations Associate](#)
- [Oracle Cloud Infrastructure 2025 Certified AI Foundations Associate](#)
- [Prompt Engineering & Programming with OpenAI](#)
- [Google Data Analytics Professional Certificate](#)
